MINI PROJECT REPORT

SYSTEM SURVEILLANCE
USING KEYLOGGER

A PROJECT REPORT

Submitted by

NAME **:** SHOBHIT MISHRA

Entry No.: 20BCS083

in partial fulfillment for the award of the degree

of

BACHELOR OF TECHNOLOGY

in
COMPUTER SCIENCE & ENGINEERING

SHRI MATA VAISHNO DEVI UNIVERSITY, KATRA
(School of Computer Science & Engineering)
JAMMU & KASHMIR – 182 320
Session 2022

<u>Acknowledgements</u>

I wish to express my profound and sincere gratitude to **Asst. Prof.- Mr. Dev Prakash**, Department of Computer Science and Engineering, Katra, who guided me into the intricacies of this project non-chalantly with matchless magnanimity.

I thank **Dr. Baijnath Kaushik**, Head of the Dept. of Computer Science & Engineering and **Mr. Ajay Kaul,** Dean of Engineering for extending their support during Course of this investigation.

I would be failing in my duty if I don't acknowledge the co-operation rendered during various stages of image interpretation by Mentor.

I am highly grateful to my Mentor who evinced keen interest and a valuable support in the progress and successful completion of my project work.

I am indebted to my guides for their constant encouragement, co-operation and help. Words of gratitude are not enough to describe the accommodation and fortitude which they have shown throughout my endeavor.

I would like to acknowledge that this project was completed entirely by me and not by someone else.

<u>Declaration</u>

I the undersigned solemnly declare that the project report **System Surveillance Using Key Logger** is based on my own work carried out during the course of our study under the supervision of **Asst. Prof.- Mr. Dev Prakash**
I assert the statements made and conclusions drawn are an outcome of my research work. I further certify that

    I.   The work contained in the report is original and has been done by me under the supervision of my supervisor.

    II.   The work has not been submitted to any other Institution for any other degree/diploma/certificate in this university or any other University of India or abroad.

    III.   Whenever we have used materials (data, theoretical analysis, and text) from other sources, we have given due credit to them in the text of the report and giving their details in the references.

SHOBHIT MISHRA
Entry Number- 20BCS083, B. Tech, 5th Sem
School of Computer Science & Engineering
Shri Mata Vaishno Devi University, Katra

I endorse the above declaration of the Student.

(Name and Signature of the Supervisor)

ABSTRACT

In many companies now-a-days data security and data recovery is the most important factor. So there are many cases where data recovery is required. For these kinds of problems keylogger is one of the best solutions which is often referred to as keylogging or keyboard capturing.

Keyboard capturing is the action of recording the keys stroke on a keyboard, typically covertly, so that the person using the keyboard is unaware that their actions are being monitored. Using keylogger application users can retrieve data when working file is damaged due to several reasons like loss of power etc.

This is a surveillance application used to track the users which logs keystrokes; uses log files to retrieve information. Using this application we can recall forgotten email or URL. In this keylogger project, whenever the user types something through the keyboard, the keystrokes are captured and mailed to the mail id of admin without the knowledge of the user within the time set.

OBJECTIVE:

The purpose of this application is to keep tracks on every key that is typed through the keyboard and send it to the admin through the mail server in the time set or given. It provides confidentiality as well as data recovery to all the IT infrastructures in need.

HARDWARE REQUIREMENTS:

Operating system   :   Windows and Linux specified
RAM   :   512MB (minimum requirement)
Hard Disk   :   1GB working space (minimum requirement)

SOFTWARE REQUIREMENTS:

Languages: Python
Tools: PyCharm, Python 3.8.0
Technology: Advanced programming using Python

<u>TABLE OF CONTENTS</u>

Introduction

1. Introduction

In many IT infrastructure organizations now-a-days, data security and data recovery are the most important factors which is basically deployed in Computer Forensics. Computer forensics consists of the art of examining digital media to preserve, recover and analyze the data in an effective manner. There are many cases where data recovery is required essentially. So by using keylogger application users can retrieve data in the time of disaster and damaging of working file due to loss of power etc. Keyloggers are specially effective in monitoring ongoing crimes. This is a surveillance application used to track the users which log keystrokes, uses log files to retrieve information, capture a record of all typed keys. The collected information is saved on the system as a hidden file or emailed to the Admin or the forensic analyst.

1.1.   Purpose

The main objective of this document is to illustrate the requirements of the project Keylogger. Now-a-days IT business infrastructures are mostly in need of the cyber security factor that is Computer Forensics. Keyloggers can effectively assist a computer forensics analyst in the examination of digital media.

Keystroke loggers are available in software and hardware form, and are used to capture and compile a record of all typed keys. The information gathered from a keystroke logger can be saved on the system as a hidden file, or emailed to the forensic analyst or the Administrator. Generic keystroke loggers typically record the keystrokes associated with the keyboard typing. Advanced keystroke loggers have many additional features. Our project keylogger has the following features;

- Monitors Keystrokes
- Sends mail to the Admin's mail Id
- Logs keystrokes including special keys

Keyloggers have the advantage of collecting information before it is encrypted; thus making a forensic analyst's job easier. Most keyloggers show no signs of any intrusion within the system allowing for them to gain typed information without anyone having knowledge of its actions except the user who use it. Keyloggers incorporate a wide array of cyber security issues and provide a practical approach to understand topics such as attacker goals, varieties of malware and their implementation, the role of malware in infecting and how stealth is archived in an infected system.

- **Programming Environment:**

1. Python 3.11
2. PyCharm Community Edition

- **Program Files Used:**

1. Keylogger.py
2. SurveillanceKeyLogger.exe
3. Keybot.vsb
4. ProjectMainKeylogger.exe

- **Document Conventions**

➢ Entire document should be justified.
➢ Convention for Main title
    - Font face: Times New Roman
    - Font style: Bold
    - Font Size: 14
        ➢ Convention for Sub title
    - Font face: Times New Roman
    - Font style: Bold
    - Font Size: 12
        ➢ Convention for body
    - Font face: Times New Roman
    - Font Size: 12

1.2.   Scope of Developing the Project

Keylogger is basically using keystroke logs to monitor the system and send the details to the admin through the mail server. Keyloggers provide the best solutions in case of such cases like; IT organizations can indicate their concerns by going after the culprit whose performance is deteriorating that of the whole organization, parents can maintain a check on their children's activities, a particular person's activities can be monitored, storing passwords of various social media profiles. Above all, keylogger is one of the best implementation of fundamentals of ethical hacking. By using this some measures could be done accordingly that would save personal data from being in the hands of total strangers.
Fig 1.2 Increased use of keylogger

2. Problem Identification

Hackers and other third parties are always looking for the vulnerabilities present inside the system. To gain knowledge about what they require from the organizations, they either gain access to the confidential data stored in the system and either cause harm to the integrity of data or may cause data loss. Another problem is that cyber crimes are increasing day by day. If we will have the chat logs or keystroke logs of victim's laptop then we can easily analyze the entire planning of the victim which will provide the best solution to eradicate or solve the problem.

2.1. Project Function:

Authorized use of a keylogger is use of such software with the knowledge and consent of the PC Owner or security administrator. As a rule, authorized monitoring software products require physical access to computer and administrative privilege for configuration and installation that excludes (or at least minimizes) risks of unauthorized use of programs. As per the rule, such software products have ability to obtain and configure a "packed" installation executable file that is delivered to the user's computer with the help of various ethical and authorized schemes. During installation it doesn't display any messages or create any windows on the screen.

2.2. Operating Environment:

The product will be operating in windows, Linux environment. The hardware configuration include Hard Disk: 40 GB, Monitor: 15" Color monitor, Keyboard: 122 keys. The basic input devices required are keyboard, mouse and output devices are monitor, mobile devices etc.
2.3.   Features:

Features of designed keylogger that are implemented and are going to be implemented in this project;

- Keystroke Recording
- Remote Monitoring
- Web History logging
- Screenshot History
- Invisible mode & password protection
- Application monitoring and file tracking
- Email reports

- **Modules used:**

1. **Smtplib:** The module included in python defines an SMTP client session object that can beused to send mail to any internet machine with an SMTP listener daemon.
2. **Threading:** It is one of the modules provided with python includes a simple-to-implementlocking mechanism that allows you to synchronize threads.
3. **Pynput:** This library allows the users to control and monitor input devices. e.g.; pynput.mouse, pynput.keyboard.

## 3. Code Implementation AND Testing:

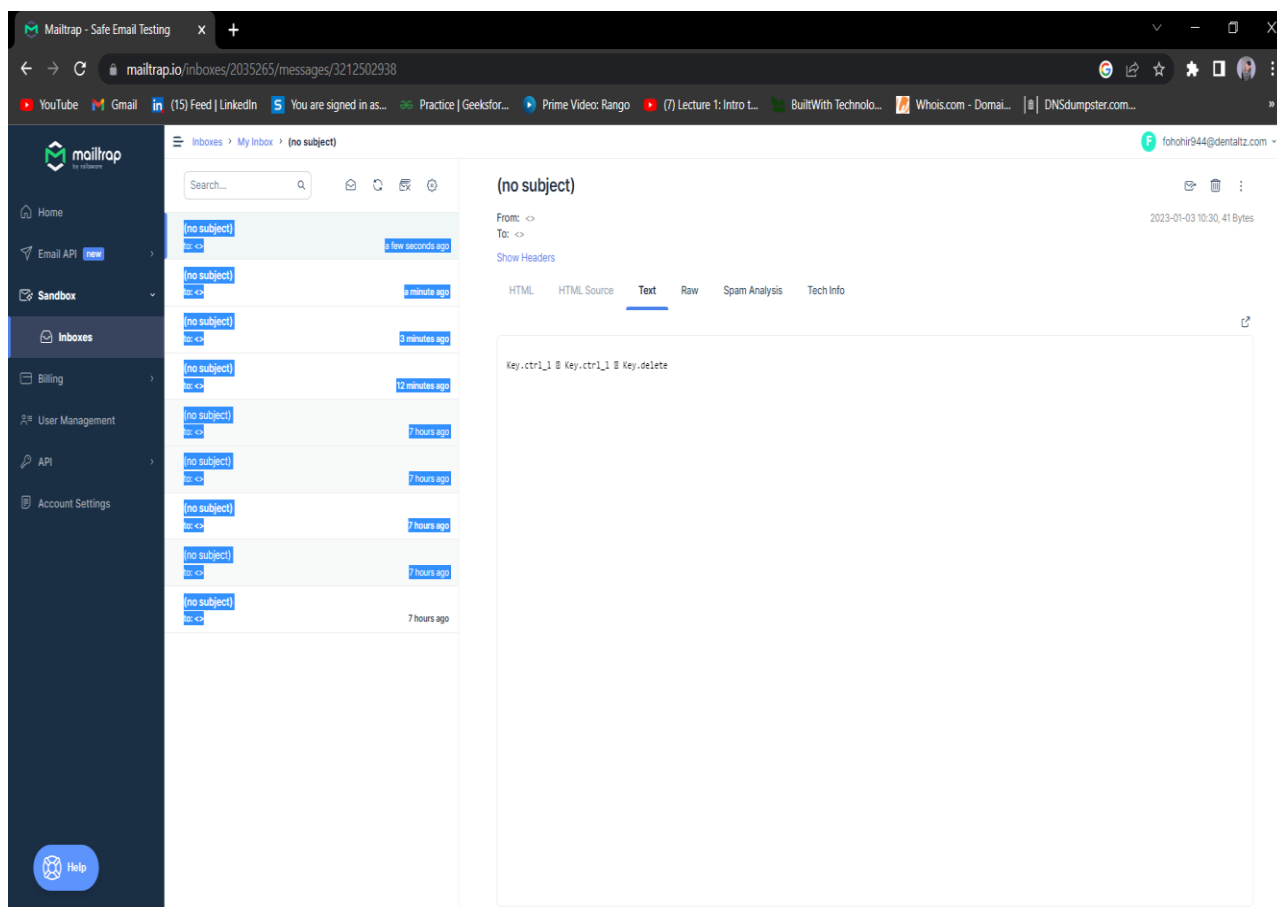

Fig 3.6

3. OUTPUT:

5. Conclusion and Future Work:

A Keylogger is a form of software which is used to track or log the all the keys that a user strikes on their keyboard, usually in secret so that the user of the system doesn't know that their actions are being monitored. It is otherwise known as keyboard capturer. These are perfectly legal and useful. They can be installed by employers to oversee the use of their computers, meaning that the employees have to complete their tasks instead of procrastinating on social media. Some of the possible amendments and improvements in this project are;

- Adding screenshots of pages visited
- Recording of system screen
- Full remote cloud monitoring
- Screenshot of immediately changed pages
- Secure web account for data storing
- Password Protection
- Parental Control

6. Bibliography:

For the all the knowledge and experience that we gained while doing this project, we Sukanya Mohanty, Chinmayeemoti Sahoo and Sahil Ali Khan would like to thank my project guide Mr. Bharat Kumar Padhifor his support and help during the semester period .

At last but not the least I would like to give my gratitude to my mentor and my lecturer for their support during internship and my friends for their help and moral support.
